

The Most Advanced Listening Experience on Planet Earth!

E.A.R.'s

Closed Tip: for hearing protection from loud sounds such as gunfire, industrial noise, racing and motorcycling.

Open Tip: for hearing enhancement in quiet activities like bow hunting & nature listening, and for communications.

Open EAR™

MOISTURE RESISTANT!

Open Ear Technology by E.A.R. Inc. is here!!

Designed for Hunters, Shooters, Bikers, Law Enforcement, Dentists, Farming, Ranching, Truck Drivers, SWAT Teams and anyone who has a high frequency hearing loss.

Again E.A.R., Inc. brings you the most advanced technology in hearing enhancement and protection. Let's take a look at **WHAT IS "OPEN EAR ACOUSTICS"** and why it is **HOT...HOT...HOT** in the hearing health care market! Behind-The-Ear hearing instruments have grown from 16% before 2001 to 42.8% of all fittings in 2006. Reasons for this success include better performance, better cosmetics and no occlusion effect! (Source: National Hearing Industries Association.)

The Problem: Traditionally, the major problems with high end hearing aids and electronic hearing protection systems have been **occlusion** (that "stuffed up" feeling that results from the ear canal being totally filled) and **feedback** or whistling sounds.

The Solution: The newest alternative on the market is "**Open Ear Technology.**" It is rapidly replacing traditional fittings (custom earmolds)" worldwide throughout the hearing aid industry. This technology provides a more **natural** perception of one's own voice in addition to the **elimination of feedback**. Of particular importance is the fact that OPEN EAR has dramatically answered the wishes of people who suffer from **mild or moderate high frequency hearing loss**.

What makes the OPEN E.A.R.™ so special?

- **100% DIGITAL.**
- **Designed to accommodate high frequency hearing loss.**
- **Programmable** to an individual's hearing acuity with an audiogram from a board-certified, licensed provider.
- **Multifunctional use.** Use it like a hearing aid or change the tips and use it for loud sounds such as shooting or hunting. (**Note:** In this case, superior sound quality is delivered to the ear, but most clients will experience some degree of occlusion due to the unopen ear tips that are required for loud sounds such as gunfire or motorcycling.)
- **Multi-Memory.** Can be programmed to handle different listening situations.
- **Easy to use.** Memory can be changed by simply pressing a button.
- **Moisture-resistant casing.** Moisture is the cause of most hearing instrument failures.
- **No need for ear impressions.**
- **Extremely small.** The OPEN E.A.R. does not require large tubing to support the receiver in the ear. Does not interfere with hair, hat or glasses.
- **OPEN E.A.R. can be reprogrammed** with proprietary software should the user's hearing requirements change.
- **Components** include: 2 Digital OPEN E.A.R. units, 2 sets open-ear tips, 2 sets closed-ear tips, batteries, cleaning tool, instructions, clamshell carrying case.
- **ONE YEAR WARRANTY.**
